# New Platform 2019

The screenshot shows the Gale Academic OneFile Select website. At the top, it displays 'My Library: PT. Piranti Kharisma Pratama' and navigation options like 'Change Databases', 'English', and sign-in options for Google and Microsoft. The main header features the 'GALE' logo and the title 'GALE ACADEMIC ONEFILE SELECT'. Below this is a search bar with a dropdown menu set to 'Basic Search' and a 'Search...' input field. A callout box labeled 'Account virtual drive' points to the top right corner. Below the search bar, there are two callout boxes: 'Jenis dokumen' pointing to the search bar area and 'Pencarian dasar' pointing to the search bar. To the right of the search bar are icons for 'Title List', 'Search History', 'Get Link', and 'Highlights and Notes'. The 'SEARCH TOOLS' section includes three options: 'Topic Finder' (visualize connections), 'Subject Guide Search' (search subject index), and 'Publication Search' (search through publications). At the bottom, the footer contains the Gale logo, navigation links (ABOUT | HELP | DICTIONARY | CONTACT US | TERMS OF USE | PRIVACY POLICY | ACCESSIBILITY | END SESSION), and the 'EMPOWER' logo. A small note at the bottom right states: 'Gale Academic OneFile Select contains 53,909,441 articles. Updated August 04, 2019.'

# Pencarian Dasar

The screenshot shows the Gale Academic OneFile Select website interface. At the top, it displays 'My Library: PT. Piranti Kharisma Pratama', 'Change Databases', 'English', and user login information for 'bos kecil'. The main header features the GALE logo and the text 'GALE ACADEMIC ONEFILE SELECT'. Below this is a search bar with a dropdown menu set to 'Basic Search' and a search input field. A callout box labeled 'Rubah Bahasa' points to the language dropdown menu. Another callout box labeled 'Google Classroom' points to the 'Save documents, citations, and highlights in Google Drive™' text. A third callout box labeled 'Akun gmail' points to the Google account login icon. Below the search bar, there are icons for 'Title List', 'Search History', 'Get Link', and 'Highlights and Notes'. The 'SEARCH TOOLS' section includes three options: 'Topic Finder' (described as visualizing connections between search terms and topics), 'Subject Guide Search' (described as searching a subject index for specific terms), and 'Publication Search' (described as searching through publications in Gale Academic OneFile Select). Callout boxes at the bottom identify these as 'Pencarian topik ( 3D)', 'Pencarian subjek manual', and 'Pencarian Jurnal' respectively. The Windows taskbar at the bottom shows the system tray with the time '2:39 PM' and date '05-Aug-19'.

### Introduction

Passed in 1973, the U.S. **Endangered Species Act (ESA)** includes strong protections for listed threatened and **endangered species** and has helped stabilize and recover hundreds of listed species, such as the **bald eagle** and gray whale (Taylor, Suckling & Rachlinski, 2005; Schwartz, 2008; Suckling et al., 2016). In part because of its strong protections, the ESA has engendered substantial opposition from industry lobby groups, who perceive the law as threatening their profits and have been effective in generating opposition to species protections among members of the U.S. Congress. One common refrain from opponents of the ESA in Congress and elsewhere is that the law is a failure because only 2% of listed species have been fully recovered and delisted (Bishop, 2013).

The number of delistings, however, is a poor measure of the success of the ESA because most species have not been protected for sufficient time such that they would be expected to have recovered. Suckling et al. (2016), for example, found that on average listed **birds** had been protected just 36 years, but their federal recovery plans estimated an average of 63 years for recovery. Short of recovery, a number of studies have found the ESA is effectively stabilizing or improving the status of species, using both biennial status assessments produced by the U.S. Fish and **Wildlife Service** for Congress and abundance trends (Male & Bean, 2005; Taylor, Suckling & Rachlinski, 2005; Gibbs & Currie, 2012; Suckling et al., 2016).

In addition to recovering species, one of the primary purposes of the ESA is to prevent species **extinction**. Previous studies indicate the ESA has been successful in this regard (McMillan & Wilcove, 1994; Scott et al., 2006). As of 2008, the ESA was estimated to have prevented the extinction of at least 227 species and the number of species delisted due to recovery outnumbered the number of species delisted for extinction by 14-7 (Scott et al., 2006). In this study, we identified all ESA listed species that are extinct or possibly

### Introduction

Passed in 1973, the U.S. Endangered Species Act (ESA) includes strong protections for listed threatened and endangered species and has helped stabilize and recover hundreds of listed species, such as the bald eagle and gray whale (Taylor, Suckling & Rachlinski, 2005; Schwartz, 2008; Suckling et al., 2016). In part because of its strong protections, the ESA has engendered substantial opposition from industry lobby groups, who perceive the law as threatening their profits and have been effective in generating opposition to species protections among members of the U.S. Congress. One common refrain from opponents of the ESA in Congress and elsewhere is that the law is a failure because only 2% of listed species have been fully recovered and delisted (Bishop, 2013).

The number of delistings, however, is a poor measure of the success of the ESA because most species have not been protected for sufficient time such that they would be expected to have recovered. Suckling et al. (2016), for example, found that on average listed birds had been protected just 36 years, but their federal recovery plans estimated an average of 63 years for recovery. Short of recovery, a number of studies have found the ESA is effectively stabilizing or improving the status of species, using both biennial status assessments produced by the U.S. Fish and Wildlife Service for Congress and abundance trends (Male & Bean, 2005; Taylor, Suckling & Rachlinski, 2005; Gibbs & Currie, 2012; Suckling et al., 2016).

In addition to recovering species, one of the primary purposes of the ESA is to prevent species extinction. Previous studies indicate the ESA has been successful in this regard (McMillan & Wilcove, 1994; Scott et al., 2006). As of 2008, the ESA was estimated to have prevented the extinction of at least 227 species and the number of species delisted due to recovery outnumbered the number of species delisted for extinction by 14-7 (Scott et al., 2006). In this study, we identified all ESA listed species that are extinct or possibly extinct to quantify the number of species for which ESA protections have failed and use these figures to update the estimated number of species extinctions prevented. This is the first study in over 20 years to compile data on extinction of ESA listed species, providing an important measure of one of the world's strongest conservation laws (McMillan & Wilcove, 1994).

### Methods

To identify extinct or possibly extinct ESA listed species, we examined the status of all 1,747 (species, subspecies and distinct population segments) U.S. listed or formerly listed species, excluding species delisted based on a change in taxonomy or new information showing the original listing to have been erroneous. We determined species to be extinct or possibly extinct based on not being observed for at

### Introduction

Passed in 1973, the U.S. Species Act (ESA) includes strong protections for listed threatened and endangered species and has helped stabilize and recover hundreds of listed species, such as the bald eagle and gray whale (Taylor, Suckling & Rachlinski, 2005; Schwartz, 2008; Suckling et al., 2016). In part because of its strong protections, the ESA has engendered substantial opposition from industry lobby groups, who perceive the law as threatening their profits and have been effective in generating opposition to species protections among members of the U.S. Congress. One common refrain from opponents of the ESA in Congress and elsewhere is that the law is a failure because only 2% of listed species have been fully recovered and delisted (Bishop, 2013).

The screenshot shows a web browser displaying a document page from Gale Academic OneFile Select. The document title is "Extinction and the U.S. Endangered Species Act". The authors listed are Noah Greenwald, Kieran F. Suckling, Brett Hartl, and Loyal A. Mehrhoff, dated April 22, 2019. The document is from PeerJ, Volume 7, published by PeerJ, Ltd. The document type is an article, 3,831 words long, with a DOI of 10.7717/peerj.5803. A purple callout box with the text "Streaming dan download mp3" is positioned over the document title. Below the document information, there is a "Listen" button and a progress bar. A notification box in the center of the page states: "Document(s) have been sent to Google Drive and will appear shortly." The main content area shows the beginning of the article's introduction, which discusses the U.S. Species Act (ESA) and its impact on species conservation. The text is partially highlighted in green. On the right side, there are sections for "EXPLORE", "More Like This", and "Related Subjects". The Windows taskbar is visible at the bottom of the screen, showing the search bar and various application icons.
